**Description**

In our internal testing, we found that in **Order Management**, when a user enters a quantity greater than the available quantity, the appropriate validation error message is displayed within the quantity cell. However, the **Review & Place Order** button remains enabled, allowing the user to proceed to the Order Review screen despite the validation error.

## Steps to Reproduce

1. Navigate to **Order Management**.
2. Select an item with a defined available quantity.
3. Enter a quantity greater than the available quantity.
4. Observe the validation error displayed in the quantity cell.
5. Check the **Review & Place Order** button.
6. Click the button and proceed to the Order Review screen.

## Actual Result

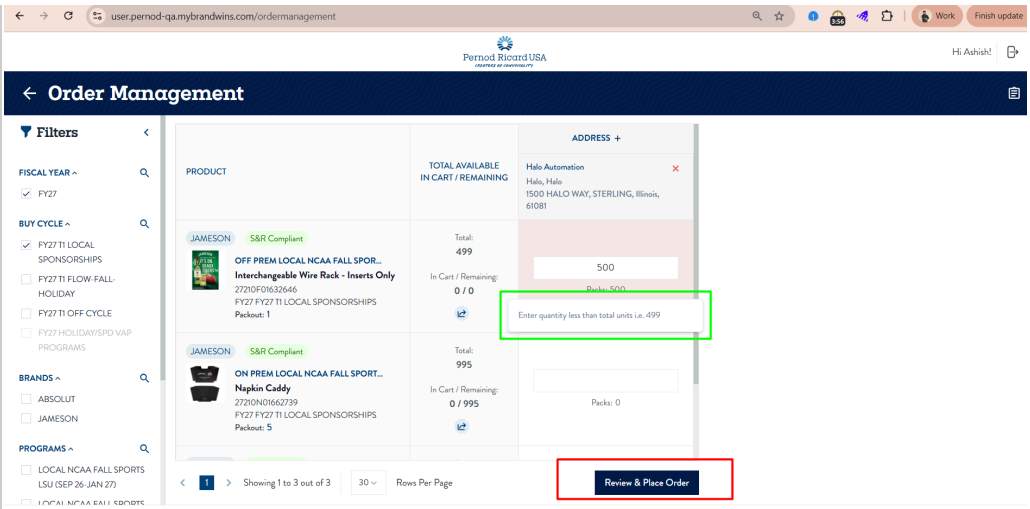

The validation error is displayed correctly, but the **Review & Place Order** button remains enabled, allowing the user to proceed despite the validation error.

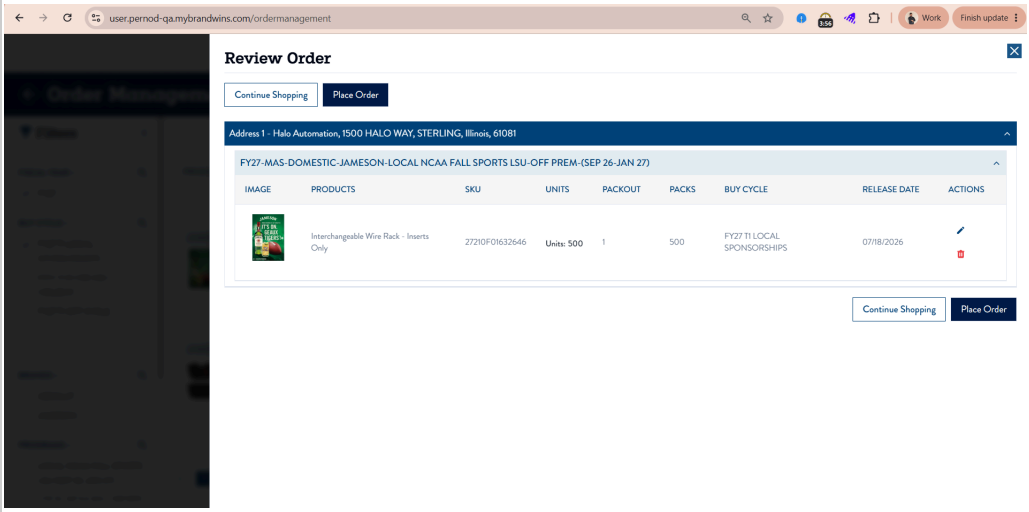

## Expected Result

When a validation error occurs because the entered quantity exceeds the available inventory, clicking **Review & Place Order** should display a pop-up similar to the **Invalid Packout** scenario, showing the relevant error message and item details.

The user should not be allowed to proceed to the **Order Review** screen until all quantity-related validation errors are resolved.

1. If multiple validations exist (e.g., **Depleted Inventory** for one item and **Invalid Packout** for another), the **Depleted Inventory** pop-up should be displayed first. Once the depleted inventory quantity is corrected, any remaining validation error should then be displayed.
2. The user should remain on the current screen and should only be allowed to proceed to **Order Review & Place Order** once all quantity-related validation errors have been resolved.

## Comments

Comment by Harsh Jangid [ 09/21/2026 ]

Hi Sajal Sharma ,

Updated the order management flow to handle depleted quantities:

- Implemented the **Depleted Quantity** popup when entered quantity exceeds remaining inventory.
- Handled cell-level error filtering so only the affected shipping addresses are listed in the popup rather than all addresses for that product.

Hi Tanay Joshi , I have verified the changes. Please assign the ticket further.

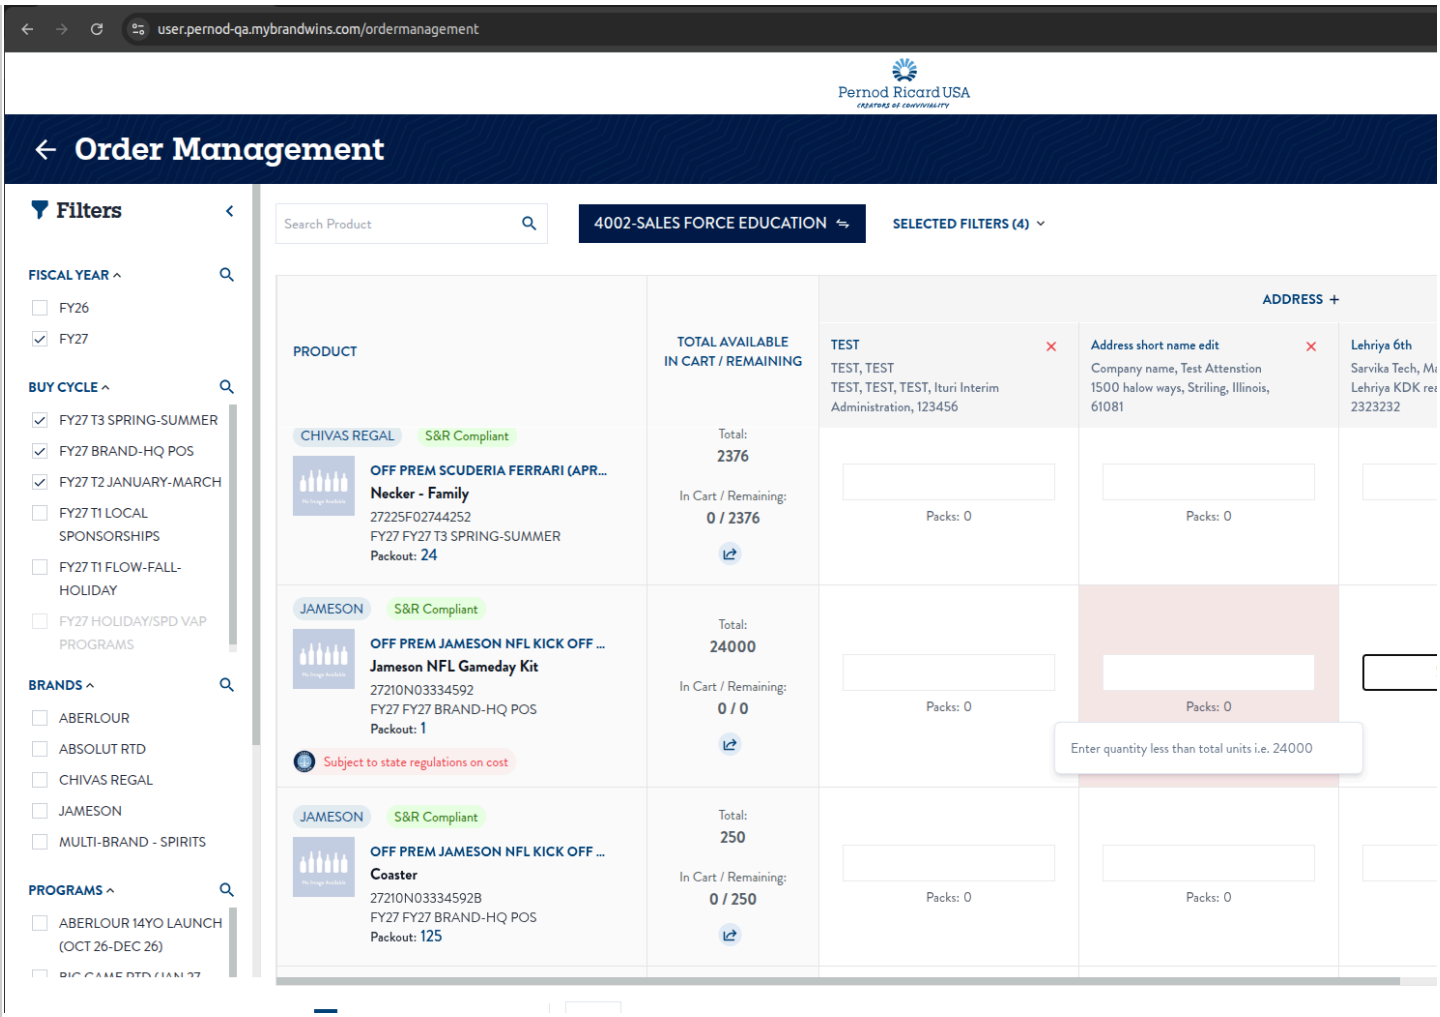

Comment by kritika.sharma [ 09/24/2026 ]

Harsh Jangid Pls check

The issue occurs sporadically where the user is able to enter a quantity greater than the available total units without receiving a validation error and proceed to the **Re**

Additionally, when the invalid quantity is cleared, the validation message still persists instead of being removed.

Hi kritika.sharma , I have fixed the issues please verify

1. The validation error now appears when a quantity greater than the available units is entered, so the user can no longer proceed to Review Order with an invalid
2. The validation message is now removed once the invalid quantity is cleared or corrected.
3. If the total quantity of a product across all address cells exceeds the available units, the error now shows on every cell where a quantity is entered for that produ total comes back within the available units, the errors clear from all the cells automatically
